

RK IN MOTION™

Workstations that **Work SMART**

Phoenix Mecano has been a leader in the manufacturing industry through the use of their simplified Lean process in delivering a wide range of high quality, flexible products and solutions that can be tailored precisely to create a lean-optimized work area. This modular concept means that these workstation systems are flexible, expandable, easily modified as needed, and can now be enhanced with automated technology to deliver a trusted solution that will work smart from the start.

PHOENIX MECANO

FLEXIBLE, ERGONOMIC, MOBILE

Customizable Workbenches

Save time and money by getting a workbench that has only the parts and pieces you need by using our simplified online configurator to quickly build your perfect work bench. After your selection is complete, data sheets and CAD data will be generated and available for download. You also have the option of requesting a quotation directly from our Design Engineering Team for the workbench assembly you have put together. Give it a try and create your individual workstation system!

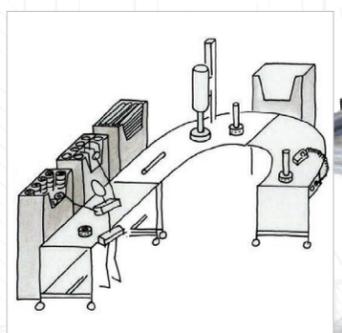

Optimized Configuration

Having all your materials and components for successful assembly in one place eliminates wasted time and mistakes.

One-Piece Workflow

Arranging successive operational steps in a U shape reduces travel and avoids the need for buffer inventories. If process steps are optimally synchronized, it is possible to achieve one-piece workflow.

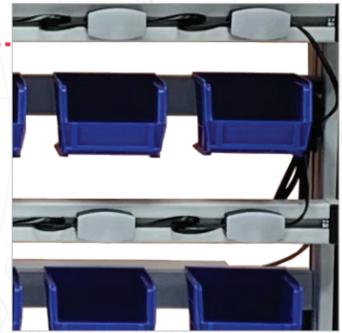

Workflex LED Lighting

Better vision means better value. Our light systems adjust to your needs & environment to deliver the best possible light to do the job right.

Additional Accessories

We offer an extensive line of automated accessories to choose from, including electric screwdrivers and balancers.

SETAGO Pick2Light

By using simple mistake-proofing technology, errors can be eliminated from the work process. This digital light up workflow system that eliminates paper job instructions and costly training. It's easy to install and implement without any special training.

Height Adjustable Columns

Having adjustable columns on your workbench creates an ergonomic space for each user. These electronic height adjustable columns range in sizes and offer programmable memory features.

Conveyor Systems

Automated, Rugged, Fast.

Conveyors and related automation equipment help optimize your work space by eliminating wasted time in transport distances. We offer an extensive line of conveyor and rolling cart systems that can be customized and easily modified when needed.

Optimized Work Areas For Maximum Efficiency

An optimized process begins with a safe, clean and well designed work area. Tools and components are arranged so as to enable a harmonious workflow. Our tailor-made workstation systems are created using high quality aluminum profiles from our **RK Rose + Krieger** product line to deliver the **RK In Motion** work stations that work **SMART**.

Our focus on value-added services fosters efficient and conscientious use of resources. This means that transport distances can be reduced, workplaces optimized, processes accelerated and flexibility and responsiveness continually improved.

SETAGO® Pick2Light

Fail-Safe, Trusted Technology.

SETAGO® Pick2Light sets itself apart from previous Pick2Light systems with its brilliant simplicity in three key areas of installation, setup, and application.

Continuous improvement to the existing processes represent the biggest obstacle to the success of a new system. We know this and have given a lot of thought about how to make it as easy as possible to get started.

Installation

Innovative Adapter plates and click-lock systems allow for effortless attachment of the sensors.

Setup

The production processes are set up in an intuitive way, and are set up quickly enough so that you are ready to go in just a short time.

Application

Working with SETAGO® is so easy that anyone can successfully follow its assembly processes without any specialized training. Try it out for yourself!
