Mecano Components Co. Ltd
Shanghai, China

In 1969 ROSE Systemtechnik GmbH was founded in Porta Westfalica, Germany. Today ROSE is one of the world's leading and innovative providers of industrial enclosure system engineering, employing over 350 people at the German headquarter.

In association with Phoenix Mecano AG, Switzerland, we develop and manufacture high-quality industrial enclosures and system solutions for areas such as mechanical and plant engineering, automation engineering, potentially explosive atmospheres, instrumentation, control and automation technology, as well as the foodstuff and beverage industry.

Our product range comprises the following:

- Standard industrial enclosures made of aluminium, stainless steel and plastics for individual installations of electrical connection technology and electronic components.
- Operating and display enclosures based on aluminium profile systems and stainless steel materials for HMI applications with industrial PCs, PLC control systems and visualization units, including suspension systems.
- Components for explosion protection with junction boxes and control stations for worldwide use in potentially explosive atmospheres, as well as the petrochemical and chemical industry in both onshore and offshore environments.

Our business success is based on a wide range of products, a high quality standard, constant innovation and an exceptional level of service. You decide the condition of delivery – the un-machined enclosure, a partial assembly or a completely assembled and tested customized system solution.

Machining potentials

We can perform the most diverse range of machining operations for our metal and plastic enclosures, including, for example:

■ Milling:

We mill industrial, operating and display enclosures individually to conform to our customers' specifications. Our modern CNC machines permit ultra-precise filigree machining. The machine scans the enclosure and permits extremely fine milling of the surface, for preparatory accommodation of a membrane keypad with no projection, for example.

■ Drilling, thread-cutting and back countersinking:

We have a broad range of machining options, in order to adapt our enclosures precisely to our customers' requirements: from standard thread-cutting, up to and including more complex back countersinking using special tools.

■ Engraving:

Another important design option for our enclosures and operating and control equipment is individual engraving to the customer's requirements. Engraving can be performed simultaneously with machining. We can engrave images or texts in various typefaces, shapes and colours.

■ Laser machining:

We use the latest technologies – including laser machining of our enclosures, for example – to assure best possible service for our customers.

Surface finishing technology

Our customers' satisfaction and excellent service are our top priority at ROSE Systemtechnik. We can, on request, supply customised enclosures which harmonise with your company's Corporate Design. This will enable you to position your industrial enclosure conspicuously for PR effect. Our range of services includes:

- Painting, coating or wet painting
- Engraving
- Printing with screen or pad printing
- Special coatings

Main installation

ROSE Systemtechnik performs the equipping of all industrial enclosures and control cabinets as a standard procedure: this includes, on the one hand, installation of the lid, the cable connectorisation and the earthing (grounding) screws. Our services also include assembly and fitting of rating plates to our Ex and Ex d enclosures.

We also provide, in addition to our standard range, customised assembly and equipping of our polyester, stainless-steel and aluminium enclosures.

- All types of cable glands
- Fitting of/equipping with terminals
- Assembly of mounting plates
- Fitting of membrane keypads and final electrical testing

In order to provide our customers with optimum service down to the last detail, we also perform all wiring operations for terminal enclosures, electronics enclosures, and also for display and operating enclosures. Our range of services also includes the assembly of control cabinets, equipping of boards/cards, followed by functional testing.

■ All-in or partial wiring:

We can, on request, also perform for our customers, after pre-wiring, the connection of all cables to the mounting rails, operating and display elements.

■ Control-cabinet installation:

If required, we can also assemble our standard electronics or stainless-steel enclosures as control cabinets, wiring them correspondingly.

■ Equipping of boards/cards:

Equipping of boards/cards at ROSE Systemtechnik is conducted in accordance with customers' specifications and includes, for example, LEDs, plug connectors and soldering work.

■ Testing:

We can perform not only assembly/installation of membrane keypads, but also subsequent testing of these devices for complete functionality, including, in particular, display and operating enclosures.

Laboratory

ROSE Systemtechnik manufactures robust industrial enclosures in which sensitive electronics are optimally protected even under the most adverse conditions. The high quality of our enclosures is assured by means of regular tests, including, for example, IP degree of protection tests, and environmental tests. The environmental tests indicate how external influences affect ageing of the enclosure.

ROSE Systemtechnik has its own laboratory with a diverse range of test equipment in order to permit the performance of all IP degree-of-protection tests and environmental tests under standardised conditions. This equipment includes, inter alia

- Thermal and dust chamber
- Corrosion-testing instrument
- Climatic cabinets
- Immersion pool

Our tests are based on the following relevant standards:

- DIN EN 60529
- DIN EN 60068
- DIN EN 60079
- DIN EN ISO 9227

Environmental tests: Climate, corrosion and ESD

ROSE uses standardised procedures to determine how other influences affect ageing of its enclosures.

We submit our products to the following tests:

- Exposure to heat
- Temperature measurements (in order, for example, to eliminate spontaneous ignition of dust/gas)
- Exposure to cold
- Exposure to climatic effects
- Exposure to salt spray (DIN EN ISO 9227)
- Outdoor exposure tests
- ESD electrostatic dissipation test

Mechanical loading test

Not only moisture, dust, extreme temperatures and corrosion can reduce the service-life of technological enclosures: mechanical loads are also a factor which should not be underestimated. We can simulate these stresses on a test system specially designed for this purpose.

ROSE supplies products and services that perform significantly better than the regular standard. These include, for example, an electronic ordering system, assistance in prototyping, and first article inspection at your site.

We also attach great importance to comprehensive advice and are pleased to evolve special solutions for your particular application. And why do we do all this? Because we want you to be a satisfied customer. And because satisfied customers are the best customers.

■ **Order management**

You rightly expect that your order will be processed quickly and correctly. For us, this is a matter of course: we guarantee for you short delivery times and consistent high quality. Our colleagues in Order Management can give you information on the status of your order at any time, and are always receptive to your wishes and your suggestions.

■ **Change management**

If something changes at short notice in your order, we will modify it to meet the new circumstances without any fuss. Our technicians, engineers and product managers are available to you at any time and are pleased to provide advice and assistance.

■ **EDI digital ordering system: Fast and efficient**

An individually configured EDI interface enables you to order our entire range of products directly from us from your ERP and/or stock management system. It couldn't be easier!

■ **On-site first article inspection: See for yourself**

Nothing can replace your own personal impression. This is why we will, if you wish, be pleased to come to you with selected enclosure or supporting-arm systems! Our Sales team members will then present the products to you in detail, explain all their properties and options, and note your wishes. You can then be certain of getting the ideal solution for your application.

■ **Tailor-made for you: our prototyping service**

Do you need a special enclosure for your application? Our design engineers and Sales team members will develop together with you the right solution. You can modify the prototype until it is ready for series production.

■ **Extremely efficient: Our project management**

We implement every order and every prototyping development using precisely defined procedures. You, the customer, benefit from this in the form of short delivery times and maximum planning certainty.

■ **Extreme accuracy: Our inspections**

We thoroughly inspect every single one of our products prior to delivery for fulfilment of the customer's specifications and for adherence to our own high quality standards.

■ **Optimally networked: Audio-visual customer support**

Some things need to be discussed in person. But not all the relevant people are always at the same place at the same time. In such cases, we can hold video conferences with our customers.

■ **Total individuality: ROSE Key Account Management**

We deploy employees to specifically support our major customers. These people know these customers' needs precisely and can therefore provide them with optimum advice.

Special enclosures are your guarantee for your individual application

You have not found the right standard enclosure? Do you have specific requirements for installation space, material, coloring, fixtures, CI-compliant design or function?

Then ask us - our design team will be happy to develop the right special enclosure solution with you.

We offer:

Production

Own production plants with expertise in the processing of:

- Aluminium, plastics, polyester and stainless steel

Construction

- Tool-compatible construction of the required housing elements
- Adaptation of different materials
- Development / design according to certification parameters

Electronics / input units

- Integration of custom electronics / EMS
- Complete solution with membrane keyboard and display
- Pre-assembled system solutions

Certification / Laboratory

To carry out all IP protection type tests and environmental tests under standardized conditions ROSE Systemtechnik has a laboratory with a variety of test facilities.

These include:

- Heat and dust chamber
- corrosion test
- climate cabinets
- plunge pool

Applications of industrial enclosures

Our enclosure systems are used wherever sensitive electronics and other vulnerable extensions need reliable protection against external influences.

Our metal and plastic products have proven their capabilities in all industrial sectors, including mechanical engineering, transport technology and energy systems, and also in automation, for 50 years now.

Their applications are manifold. In many cases, they are used in the most diverse sectors of mechanical engineering, where they assure production operations as classical terminal enclosures, or assist in achieving trouble-free production processes.

For installation of sensitive and complex electronics, our enclosures provide customers' products, in the field of control and instrumentation, for example, with an individual appearance.

Practically all applications have one thing in common: they make high demands on the quality and technical properties of the enclosures.

Our comprehensive range of products includes enclosure systems in the most diverse materials and sizes, enabling us to provide our customers with a solution for every application.

Toxicity	halogen free
Colour	Base: RAL 9005, jet black Top: RAL 7035, light grey
Temperature range	CR-(Chloroprene) seal: -20 °C to +60 °C

Approvals

Dimensions (H x W x D)	110 x 110 x 85 mm to 110 x 230 x 85 mm
Accessories	DIN rail Bearer plate Lid safety strip Blind plug set
Included in delivery	Enclosure consisting of lid and base with screws base with M20 and M25 hole for cable entry; mounting possibility of TS 35/7,5, DIN rails and adaption plates of several manufacturer

Stainless steel RMS

The ROSE Modular System

NEW
Please inquire for your individual offer!

Highly variable due to 25 base sizes with over 40,000 possible combinations

- Flexible mounting options in the base and mounting holes for wall mounting
- Optional screwed or hinged lid design
- Take advantage of our extensive product services:
 - mechanical machining
 - Surface finishing
 - Assembly

- Material 1.4301/304
- Surface grain 320, grinded
- Ingress protection screwed IP66 / IP69
hinged IP66
- Accessories External mounting bracket
Flanges
Mounting plates
DIN rails

Operating and display enclosures for many different applications

Every day we, as a premium supplier of operating and display enclosures, and also of supporting-arm systems, are working on individual solutions with, at the same time, short delivery times, market-orientated prices and reliable supply capability for standard components.

ROSE has also developed an extremely broad range of control enclosure and supporting-arm products.

In the field of supporting arms, customers can select from nine different systems, covering a load range from 0 to 200 kg and with a maximum reach of 3 m.

Six different control enclosures are available to accommodate machine control systems, and can be supplied individually machined for you from batch sizes of one and upward. The range is augmented by our Moterm II mobile and height-adjustable stand system.

Product highlights

GTL

(PG 49.62)

- Aluminium profile suspension system for heavy loads
- Can be combined with GTN II suspension system/ heightadjustment system GTV and control enclosures
- Optional adjustment for horizontal alignment of the profile

GTH 48 easy / GTH 60 easy

(PG 57)

- Increased load range compared to GTH 48/60
- Significantly reduced assembly effort
- Reduction of edges and columns of the system and less dead space
- Alternative to self-made construction solutions
 - More sturdy
 - Safer
 - More cost efficient

OPERATING AND DISPLAY ENCLOSURES

Product highlights

GT 48/2 (PG 49.49)

- Industrial circular tube system for control enclosures
- Modular construction for individual components
- Protected internal cable routing

GT 50/2 / GT 60/2 / GT 80/2 (PG 49.51 / 49.61 / 49.81)

- Robust industrial square suspension arm system for system components
- Modular construction for individual components
- High loading capacity, large extension

Technical data

Material	Connecting tube: Steel 48 x 4 mm DIN 2393-St. 37 Components: DIN EN 1706 EN AC-AISI 12 (Fe)	Connecting tube: square steel tube similar to DIN EN 10305-5 Wall thickness 5 mm Components: Cast iron with spheroidal graphite or cast aluminum
Ingress protection	IP54 to EN 60529	IP65 to EN 60529
Surface	CR or NBR	CR or NBR
Painting	Powder coating	Powder coating
Colour	Tube: galvanized Components: RAL 7043, traffic grey B Special colour on request	Tube: galvanized Components: RAL 7043, traffic grey B Special colour on request
Free cable passage	Connection tube: 40 mm diameter System elements: 40 mm diameter	GT 50/2: 16 cm ² (40 x 40 mm) GT 60/2: 25 cm ² (50 x 50 mm) GT 80/2: 49 cm ² (70 x 70 mm)

Load diagram

GTK 80 (PG 49.90)

Product highlights

- Industrial square suspension system with open cable duct for heavy loads
- Modular construction with cable channel
- Floor, top-mounting or wall exit options

Technical data

Material	Connecting tube: square ST 37 similar to DIN EN 10305-5 Wall thickness 5 mm or 8 mm Components: spheroidal graphite cast iron and/or cast aluminium Cable duct / cover: aluminium extruded profile Bearing: ball bearing, Bellow: textile fabric
Ingress protection	with top-mounting flange: IP65 to EN 60529
Seal	CR or NBR
Painting	Powder coating
Colour	Cable duct / cover: RAL 7035, light grey Components: RAL 7043, traffic grey B Special colour on request
Free cable passage	57 cm ²

Pilot 110-150
(PG 29)

- Polyamide hand enclosure for automation and control engineering
- Version with handle and integrated cable entry
- Large fitting space

Technical data

Material	Polyamide Front plate: Polystyrol
Ingress protection	IP65 to EN 60529
Flammability	UL 94 HB
Colour	RAL 1003, signal yellow
Temperature range	-40°C to +60°C

Dimensions (H x W x D)	85/75 x 85 x 191 mm to 105/75 x 85 x 266 mm
Accessories	Wall holder
Included in delivery	Enclosure with handle, including cable gland M 20 x 1.5, front plate, enclosure and front panel screws, and wall holder

Fields of application of the ROSE Ex equipment

In all areas where explosive atmospheres occur, special safety guidelines are effective which prescribe the use of specially tested components. Within the EU, the ATEX directive, which determines the safe operation of plants and systems in potentially explosive atmospheres, is effective for this purpose.

Other countries and continents have different safety guidelines in this area (IECEX, TR-TS, NEC etc.) – often these are derivatives of European ATEX legislation.

ROSE Ex enclosures made of aluminum, polyester and stainless steel, as well as Control Stations, provide reliable protection for electrical distribution systems in hazardous areas. The products are used

for gas explosion protection in zones 1 and 2 and for dust explosion protection in zones 21 and 22:

- Ex eb Increased safety
- Ex ia Intrinsic safety
- Ex db Flameproof enclosure
- Ex tb Protection through enclosures

Typical areas of application are:

- Chemical and petrochemical industry
- Process industry
- Paint processing industry
- Mining
- Silos

Chemical resistance

When assessing whether or not an enclosure is resistant to the influence of chemical substances, not only the enclosure material, but also the type of seals has to be taken into consideration.

The following tables only list the most important basic materials used for ROSE enclosures, and the most common chemical substances. These tables only contain information as to how far materials are typically resistant to such substances. Both the concentration and the ambient temperature must also be taken into account.

If several chemicals are encountered at the same time, we recommend to carry out an exact investigation to be able to correctly assess the chemical resistance of a material.

Chemical resistance of enclosure materials and seals

Chemicals	Aluminium	ABS	Poly-carbonate	Polyester	Polysterol	Polyamide	Chloropren	EPDM	NBR	Pocan	Polyurethane	PVC	Silicone
Acetone	+	-	-	-	-	•	+	+	-	+	-	-	•

Explanation of symbols

- + resistant against all concentrations
- % resistant against maximum % concentration
- C° resistant to maximum C°
- limited resistance
- not resistant
- / no information

Unless otherwise quoted, the investigation was conducted at ambient temperature. If several substances are encountered, the resistance factors could change. For this reason, we do not assume any liability for the above information.

All-in-one solutions from a single source, 'Made in Germany'

The ROSE Systemtechnik product portfolio not only offers you individual enclosure solutions, but also robust and reliable panel PCs, industrial PCs and industrial monitors, but also comprehensive solutions for drive, control and safety technology up to visualization and process control. Trust in our specialists and enjoy peace of mind on our shared journey towards Industry 4.0!

We equip our industrial PC systems with high-quality components with guaranteed long-term availability. Our stringent quality control includes burn-in endurance testing with full record-keeping and quality management with end-to-end documentation as standard – for each and every panel PC or industrial monitor.

Service

- perfectly coordinated, integrated solution models
- software integration
- hardware upgrade as needed
- 24-hour burn-in endurance testing
- completion of or help with your device certification
- everything from a single source, 'Made in Germany'

Support

- direct contact to a service technician
- fast and friendly assistance for technical problems
- professional hardware support
- straightforward, no-quibble repair policy
- personalised customer after-sales service

Why ROSE Systemtechnik GmbH

From planning and advice to turnkey delivery – we are your trusty travelling companion on the road to Industry 4.0.

- professional, expert advice and assistance – from the idea to installation
- immediate, on-site requirements/solution analysis
- expertise born of long experience
- a shared approach to solution development
- in-house development unit – for rapid implementation of your individual solution
- cutting-edge technologies and long-term availability of all components
- flexibility – quick and reliable
- one-stop service provision – including on-site installation if required
